ASSET MIX

Cash assets held in trust by the World Bank (as the Trustee) are maintained in a commingled investment portfolio (the "Pool") for all trust funds administered by the World Bank. The assets in the Pool are managed in accordance with the investment strategy established for all trust funds administered by the World Bank.

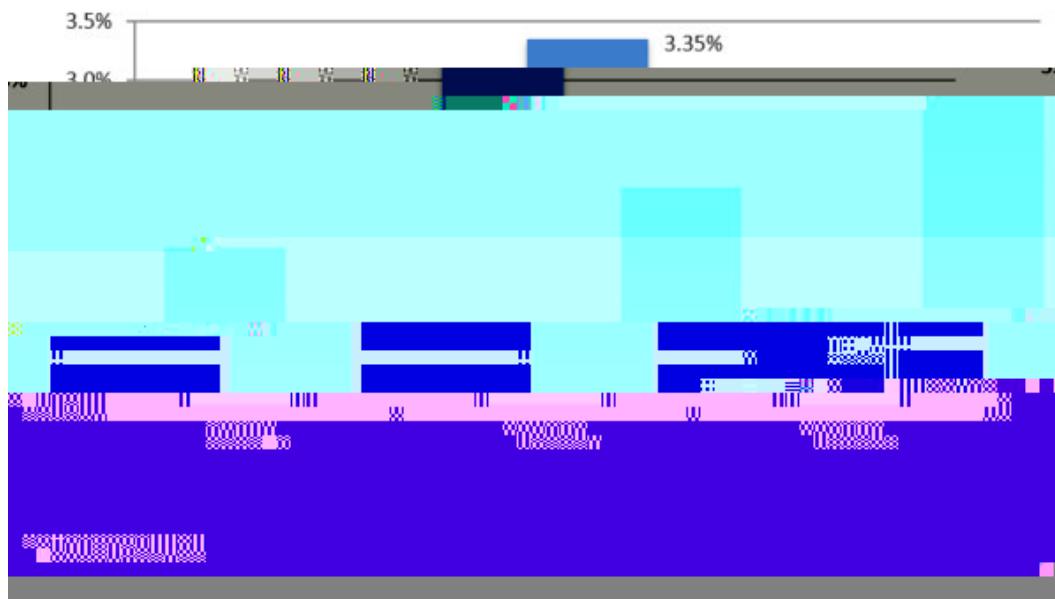

The Trust Fund balance is currently invested across three of the Pool's investment model portfolios ("Model Portfolio 0" (MP0) with an investment horizon of up to three months, "Model Portfolio 1" (MP1) with an investment horizon of one year, and "Model Portfolio 2" (MP2) with an investment horizon of three years). While MP0 has the objective of ensuring timely availability of funds to meet the short term cash flow needs, MP1 and MP2 aim to enhance returns subject to capital preservation with a high degree of confidence (based on statistical models) over the respective investment horizons. Preservation of capital is the primary investment objective. Consequently, the Trust Funds investment portfolios are managed to conservative overall risk tolerance parameters.²

The Trust Fund assets are invested in high grade fixed income and money market instruments. Currently, these instruments include high quality securities that are issued by sovereign governments, government agencies, as well as multilateral and other official institutions. In addition, eligible instruments include asset backed and agency guaranteed mortgage backed securities, as well as swaps and a range of other derivative instruments related to investments and which are used to manage the interest rate risk.
